AI BUILDER COHORT | SEASON 01

Build AI.
Launch It.
Keep It All.

A 4-week cohort where you go from zero to shipping real AI apps and agents, then publish them on our marketplace and keep every rupee you earn. No commissions. No cuts.

4 Weeks | 2 to 3 Live Classes Per Week | 100% Your Earnings | Hybrid / Online

THE PROBLEM WE'RE SOLVING

AI Feels Out of Reach

Most people think building with AI needs a CS degree or years of experience. It does not. The right path in is missing.

No Path From Learning to Earning

Courses teach theory and stop there. Nobody hands you a platform to publish what you built and start earning from it.

No Marketplace for Indie Creators

App stores favour big companies. There is no platform designed for an individual to upload their AI tool and earn from day one.

We built the cohort and platform to fix all three.

WHAT IS THE AI BUILDER COHORT?

A structured, hands-on 4-week program where you:

- Master cutting-edge AI tools end to end
- Build real, deployed AI-powered apps from scratch
- Create autonomous AI agents that work on their own
- Publish your creations on our own marketplace platform
- Earn via subscriptions, one-time sales, or free tiers
- Join a community of builders, creators and innovators

4
Weeks

2-3x
Live Classes /wk

100%
Your Earnings

0
Commission

4-WEEK CURRICULUM AT A GLANCE

Live classes 2 to 3 times per week | All sessions recorded for replay | Each class builds directly on the last

W1

Understand & Explore

How LLMs work, prompt engineering, RAG, APIs, idea scoping. Know what to build and why before writing a line.

2-3 live classes

W2

Build Your First App

Full stack AI app, RAG with vector databases, MVP in Replit, deploying live. Ship something real by end of week.

2-3 live classes

W3

Build AI Agents

ReAct loop, tool calling, multi-step workflows, agent memory. Create agents that browse, plan and execute tasks.

2-3 live classes

W4

Launch & Get Traction

Publish to platform, pricing strategy, demo content, distribution channels, analytics. End with real users.

2-3 live classes

WEEK 1 | UNDERSTAND & EXPLORE

Goal: understand how AI works, which tools exist, and define exactly what you are going to build.

1. **How LLMs Work**
   Transformers, tokens, context windows, temperature. What happens when you send a prompt.
2. **Prompt Engineering**
   Zero-shot, few-shot, chain-of-thought, system prompts, role prompting. Real examples.
3. **RAG Explained**
   Retrieval Augmented Generation: why it matters and how to give LLMs memory of your documents.
4. **APIs and Models Compared**
   OpenAI, Anthropic, Gemini, open-source. When to use which model and how much it costs.
5. **Idea to Product Thinking**
   How to spot a problem worth solving with AI and scope it to something you can ship in 4 weeks.

TOOLS YOU WILL USE

- ChatGPT + Claude API
- Cursor IDE
- n8n (no-code automation)
- Notion AI + Perplexity

RESOURCES PROVIDED

+ 50+ prompt template library
+ LLM model comparison cheatsheet
+ API pricing calculator spreadsheet
+ RAG concept diagram (printable)
+ Product idea scoping worksheet

WEEK 1 OUTCOME: Clear product idea defined | First working prompt chain built | First API call made confidently

WEEK 2 | BUILD YOUR FIRST APP

Goal: ship a live, deployed, AI-powered web app with a public URL you can share by end of the week.

1. **Full Stack AI App Architecture**
   Frontend, backend, LLM call, database. How the pieces connect and where the AI sits.
2. **Building an MVP in Replit**
   Scaffold a Next.js or Flask app, connect it to an LLM API, deploy live in one session.
3. **Adding RAG to Your App**
   Vector databases (Pinecone or Supabase) to give your app memory. Upload PDFs, query with natural language.
4. **Integrating AI into Existing Apps**
   If you already have a product, this session shows how to bolt AI onto it without breaking what works.
5. **Streaming, Latency and UX**
   Make AI responses feel fast. Streaming tokens, loading states, fallback handling.

TOOLS YOU WILL USE

- Replit (browser IDE + hosting)
- LangChain JS / Python
- Supabase + Pinecone (vector DB)
- Vercel / Railway (deploy)
- Cursor IDE (continued)

RESOURCES PROVIDED

+ App starter templates (3 types)
+ RAG implementation step-by-step guide
+ LangChain quick-start Jupyter notebook
+ Vector DB setup walkthrough
+ Deployment checklist + cost optimisation tips

WEEK 2 OUTCOME: Live deployed app with public URL | Optional RAG layer | Shareable with anyone right now

WEEK 3 | BUILD AI AGENTS

Goal: build an autonomous AI agent embedded in your app that executes multi-step tasks without manual input.

1. **What Makes an Agent**
   The ReAct loop (Reason plus Act), tool use, planning, memory. How agents decide what to do next.
2. **Tool Calling in Depth**
   Give your LLM access to external tools: web search, calculators, databases, APIs, email senders.
3. **Multi-Step Autonomous Workflows**
   Agents that complete a full task sequence without a human stepping in at every stage.
4. **Agent Memory and Persistence**
   Short-term (conversation), long-term (vector store), episodic (what happened last session).
5. **Evaluating and Debugging Agents**
   How to detect hallucination, infinite loops, wrong reasoning. How to fix it systematically.

TOOLS YOU WILL USE

- LangGraph (stateful agent graphs)
- AutoGen + CrewAI (multi-agent)
- n8n advanced (no-code pipelines)
- Tavily / Serper (web search tool)
- OpenAI Function Calling

RESOURCES PROVIDED

+ Agent architecture diagrams
+ Tool calling JSON schema templates
+ LangGraph starter project (ready to run)
+ Multi-agent workflow examples
+ Agent evaluation and debugging rubric

WEEK 3 OUTCOME: Working agent in your app | Uses 2+ external tools | Runs multi-step tasks autonomously

WEEK 4 | LAUNCH & GET TRACTION

Goal: your app is live on the platform, users are discovering it, and you have your first real feedback and traction.

1. **Publishing to the Platform**
   Step-by-step: upload app, write description, configure pricing (free / paid / subscription), go live.

2. **Demo Content That Converts**
   Record a 60-second screen demo that makes people want to try your tool. What to show, how to edit fast.

3. **Distribution Channels**
   LinkedIn, Twitter/X, Reddit, WhatsApp groups, Product Hunt, IndieHackers. Where to post for maximum reach.

4. **Reading Your Analytics**
   Platform dashboard: visits, conversions, churn, revenue per user. Using data to improve.

5. **Pricing Strategy for AI Tools**
   Free vs freemium vs subscription. What pricing signals quality and what pushes users away. Real SaaS data.

TOOLS YOU WILL USE

- Platform creator dashboard
- Loom + OBS (demo recording)
- Canva + Figma (thumbnails, social)
- Tally / Typeform (user feedback)
- Platform analytics panel

RESOURCES PROVIDED

+ Platform publishing checklist
+ Demo video script template
+ 50 community groups to post in
+ Pricing strategy reference guide
+ Social media post templates

WEEK 4 OUTCOME: App live + priced on platform | 3+ distribution posts published | First real users + feedback collected

Vibecodes intensive course

FULL ROADMAP AT A GLANCE

Week 1	Week 2	Week 3	Week 4	Live +
2-3 classes	*2-3 classes*	*2-3 classes*	*2-3 classes*	*Post-cohort*
Understand	Build App	Agents	Launch	Earning

Week	Session Topics	Key Tools	Resources Given	You Walk Away With
Week 1 Understand	How LLMs work Prompt engineering RAG concepts APIs compared	ChatGPT Claude API Cursor IDE n8n	50+ prompt templates LLM cheatsheet Idea worksheet Recordings	Clear product idea First prompt chain First API call
Week 2 Build App	App architecture MVP in Replit RAG + vector DB AI in existing apps	Replit LangChain Supabase Pinecone	App starter templates RAG guide LangChain notebook Deploy checklist	Live deployed app Optional RAG layer Public shareable URL

Week 4 Launch	Platform publishing Pricing strategy Demo content Distribution Analytics	Platform dashboard Loom Canva Tally Analytics	Launch checklist 50 community groups Pricing guide Post templates	App live + priced 3+ posts published First users + feedback

THE COHORT EXPERIENCE

Not pre-recorded videos. Not a passive course. Live sessions, real projects, real feedback.

- Live sessions via video call, 2 to 3 times every week
- Every session recorded and shared within 24 hours
- Hands-on project work in every single class
- Peer group chat for questions, feedback and support
- Office hours after each week to unblock you personally
- Certificate of completion for your resume and LinkedIn

1 Project
You ship something
real by week 4

100% Yours.

Every rupee you earn on the platform stays with you.

No cuts, no commissions, no surprises. Ever.

- ✓ You set your own price: free, one-time, or monthly subscription
- ✓ Payments go directly to you, not held or batched by the platform
- ✓ No hidden platform fees or commission on your earnings
- ✓ Full transparent dashboard: every sale, every user, in real time
- ✓ Founding cohort members get priority listing and early audience access

Our commitment: 100% earnings is a founding principle. Any future change is communicated openly, in advance, never silently.

HOW YOU EARN

Publish your app

Upload to the marketplace in one session

Set your price

Free, one-time, or monthly subscription

Reach real users

Platform handles discovery, you own the product

Get paid, keep it all

100% goes to you. No platform cut, ever.

OUR MARKETPLACE PLATFORM

Purpose-built for AI creators. Not an afterthought. Not a generic app store.

Upload Any AI App or Agent

Chatbots, automation tools, SaaS, productivity apps. If you built it with AI, it belongs here.

Free, Paid, or Subscription

Choose your model. Free tier to grow your audience, charge for premium access or monthly usage.

Reach Users Globally

Your app is discoverable by anyone on the platform. Cohort members get a built-in launch audience.

Full Analytics Dashboard

Track users, revenue, usage trends and conversion in real time. No black boxes, no surprises.

Free to publish your first app

100% earnings go to you

Day 1 earning potential at launch

∞ app types supported

WHO IS THIS FOR?

No gatekeeping. If you are willing to show up and build, you belong here.

Students and Freshers

No experience needed. Start from zero, learn by doing, and have a real AI product in your portfolio by end of week 4.

Developers

Supercharge what you already know. Build smarter, faster, and open new income streams with AI-powered products.

Entrepreneurs

Turn your AI idea into a live product. Build the MVP, publish it, start collecting users. All in 4 weeks.

Anyone Curious

If you have ever thought 'I want to build with AI but do not know where to start', this is exactly where to start.

WHY JOIN NOW?

The window is open. Not forever.

First-Mover on the Platform

The platform is new. Founding creators get priority placement, earliest user traffic, and maximum visibility before it gets crowded.

AI is Moving Very Fast

The tools and earning opportunities available today are new. Waiting 6 months means competing against people who already have a head start.

Real Earning Potential

Unlike most courses, this gives you an actual platform to monetize what you build, not just a certificate to frame on a wall.

Community from the Start

Season 01 cohort members shape the platform, give early feedback, and grow together. That founding network is worth more than any curriculum.

JOINING THE COHORT

Simple, transparent pricing. No hidden fees. Exact amounts shared at onboarding before any payment.

Standard Enrollment

Flat cohort fee

Join to learn, build, and get full access to curriculum, live sessions, recordings, community, and the platform to publish your work.

- All 4 weeks of live sessions
- All session recordings
- Full resource pack per week
- Platform publishing access

RECOMMENDED

Contributor Tier

Based on contribution

Actively build and publish apps on the platform.
Your cohort fee reflects the value you create.
High contributors may get access at reduced cost.

- Everything in Standard
- Priority platform placement
- Contribution recognized publicly
- Reduced or zero fee if eligible

Exact fees shared during onboarding. No payment before you speak to the team.

FREQUENTLY ASKED QUESTIONS

Do I need coding experience?	Not at all. The cohort is for mixed audiences from zero experience to experienced developers. The tools are designed to lower the barrier significantly.
What exactly will I build?	A live deployed AI app with an agent layer built in by week 4. Specifics depend on your idea from week 1: chatbots, automation tools, document Q&A, email agents, and more.
Do I really keep 100% of earnings?	Yes. The platform is designed so creators keep everything they earn. Any future change to this is communicated openly in advance, never quietly.
What if I miss a live session?	Every session is recorded and shared within 24 hours. Missing a class means watching the replay before the next one. Manageable even if life gets in the way.
When can I start earning on the platform?	From platform launch day. Founding cohort members get priority placement and an early built-in audience from cohort participants and their networks.
What specific resources are provided each week?	Session recordings, written guides, starter templates, cheatsheets and reference sheets. A full list is in slides 5 to 8.
Is the platform only open to cohort members?	Eventually open to all creators globally. Cohort members get early, priority access and help shape how the platform grows.

READY TO BUILD YOUR FUTURE WITH AI?

Season 01 seats are limited. Founding cohort members get the best access, the earliest platform spot, and the most to gain from joining now.
